■ ACCESS CONTROL

■ SCHRACK INFO

The SMART ACCESS compact access control system is a read-only stand-alone terminal, i.e. it does not need to be connected to a PC or control unit.

Overall, SMART ACCESS can manage up to 200 user transponders (cards or key fobs) in monitoring doors, turnstiles or barriers.

■ TOP APPLICATIONS

BUSINESS Even if transponders are already in use, SMART ACCESS can secure an overlooked or newly added door without having to provide new transponders. **CAMPING SITES HOLIDAY VILLAGES** Services and leisure facilities should only be made accessible to guests - SMART ACCESS makes this possible. **GOLF COURSES** **YACHTING CLUBS** Transponders lost on the course or in the water can be replaced quickly and easily (in the lost ones blocked); additional transponders are easy to generate for guests or temporary club members. **BACK TO SCHRACK FOR BUILDING EQUIPMENT** [To top](#) [Print page](#) [Download PDF](#)
