SWITCH DISCONNECTORS & CAM SWITCHES Main switches and main switches with EMERGENCY STOP for all production machines meeting IEC/EN60947-3 and VDE 0660 part 107 for application categories AC23-B or DC-23B. Switch disconnectors are useful where compact ON-OFF switches with large contact gaps (isolators), and a high contact pressure and greater short-circuit protection are required. Cam switches can be used e.g. as motor switches, main switches, control switches or instrument switches. SCHRACK cam switches are modular, operate with double disconnection per pole and two contacts per switch cell. **BACK TO SCHRACK SOLUTIONS FOR INDUSTRY** [To top](#) [Print page](#) [Download PDF](#) [Express your opinion](#) [Website: plan2net](#)
