SCHRACK LIGHTING TECHNOLOGY

DODECA

The 12x screen made of aluminium slats with titanium and magnesium treated surfaces prevents any kind of glare effects.

In the 1-lamp design, the adjustability of the lamp makes it possible to produce both symmetrical and asymmetrical lighting effects.

The design with multi-watt devices enable you to adjust the required levels of brightness later.

The prismatic dome accessory is also a unique feature – non-glare illumination of the decoration object.

It is especially suited for office landscapes, shopping centres, even shop scenes.
