HSE WIRING TESTERS The HSE Wiring Tester with LED display is an easy to operate CEV (cost effective) wiring tester that allows easy and exact line testing in structured cabling. The HSE wiring tester with digital display also offers a user-friendly digital error display. The device tests for open pairs, shorted pairs, reversed pairs, miswired pairs, miswirings and shield crimping. The large LED display shows the configuration between the A end and the B end of the cable tract (1:1, 2:2, up to 9:9, shielded) or 1:2, 2:1 when an error arises. The 5 small LED indicators retain the result after the test and display the state of the individual pairs.
